TOPICS ON SKILLS AND OCCUPATIONS

Topic 1. Skills combinations in (green) occupations.

Potential purpose of the thesis. The present project aims at applying the lenses of the theory of recombinant innovation to the composition and combination of skills within occupations. By applying the fundaments of the theory of recombination the thesis will explore how different occupations are differently organised in terms of skills type and intensity. An application of such approach will be applied to green or to digital occupations, or to other fields. The empirical part of the thesis will deal with describing how different skills are combined in different occupations, and will conduct comparative analyses across occupations groups.
